Whenever and wherever there is a need to design and space plan the interior of a building, Maars is a partner you can trust to turn your plans into reality, for projects large or small, be they purely functional or luxuriously innovative.

In talking to Maars, you are directly in touch with the manufacturer. Just tell us what your requirements are and we will have the perfect solution. Or we will work with you to develop and produce it. In other words, 'Create your environment'.

Maars has many years of experience in a multitude of different projects, nationally and internationally. They range from offices to airports, from colleges to laboratories and much more.

But, Maars goes a lot further than simply manufacturing and supplying superior partitioning systems. We take aftercare very seriously. And that includes relocating our systems, supplying additional parts to expand your existing installation. As always, the only thing we need to know is exactly what you want.

Because, most of all, Maars is there to help translate your ideas into practical, flexible, aesthetically pleasing interiors, where it is a pleasure to live and work.

In choosing the Maars Intersign partitioning system, you're opting for long-lasting quality, style and flexibility and also for virtually unlimited possibilities for project design.

The Maars Intersign partitioning system imposes few, if any, restrictions on you. Its quick build steel frame construction allows you almost total freedom to design and achieve almost any required layout.

Whether you want horizontal or vertical partitions, totally transparent or solid panels, or a stylish combination of both, the Maars Intersign system enables you to translate just about any requirement into a pleasing yet practical reality. It remains durable yet relocatable, with restrained, functional details.

Maars Intersign is truly remarkable in that it allows you to use your own choice between steel panels or panels with veneer or melamine finishes, without having to modify the basic structure at all. It is even designed to use different panelling on either side of the wall!

We hardly need say that this top-class product also has exceptional noise-insulating and fire-resistant properties.

Top-class materials for a top-of-the-range product. Naturally, if you want to make a top-class product that is versatile, robust, functional and beautifully finished, you have to start with high-quality materials, together with state-of-the-art manufacturing facility.

The Maars Intersign system incorporates both. Probably the greatest asset of the system is its sheer versatility, which is reflected in the countless possibilities it affords the designer. There's the versatile choice between steel, veneer or melamine finished panelling. There's the benefit of choosing from 26 standard RAL colours (optionally every colour of your choice) of high-quality epoxy powder coating to the metal panels and framework and the choice of a variety of melamines and timber finishes.

Create your environment

Create your environment

Additionally, there's a wide choice of glasses, doors and door fittings. As office walls are not just for separating spaces, the system also provides attachment points for storage units and shelving.

It will come as no surprise to know that, with so many possibilities, there is one thing that remains constant and that is naturally, the consistent high quality of the Maars Intersign partitioning system.
